

Calibration paper

Print in colour at 100 % — never “fit to page”.

Zone M Medium items, up to 85 mm

Zone S Small items, up to 40 mm

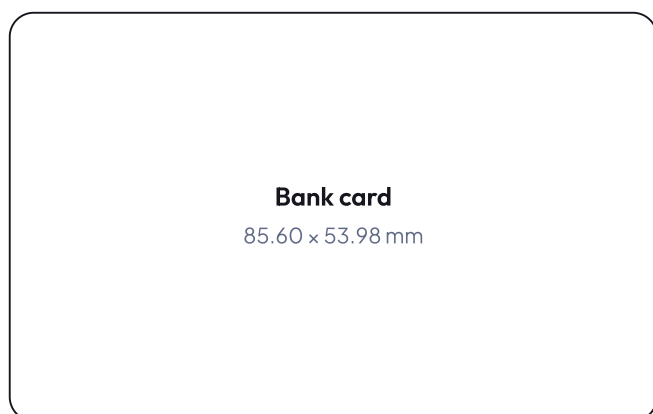

How to use

- 1 Print in colour at 100 % on plain, matte white paper.
- 2 Lay it flat in soft, even daylight. Put your item in the zone that fits it.
- 3 In the app, choose Calibration paper. Keep the whole zone, border included, in the photo.

Check the print size

A bank card should cover this outline exactly.

What goes where

Zone S

Rings, earrings, coins and small pendants, up to 40 mm across.

Zone M

Bracelets, watches and larger pendants, up to 85 mm across. Coil chains loosely.

Bigger than that?

Lay a bank card beside it instead.

Chart, border and codes

They let the app correct colour, size and lens distortion. Keep the sheet clean.

No card? Hold a ruler to this scale. It must measure exactly 180 mm.
